Facebook channels people's rage into organised protests.

Leonid Bershidsky

The unleashing role of social networks played during the 2011 Arab Spring has long been noted. But Facebook was also a behind-the-scenes player in France - a country that has always disliked the \\

When high-rise living gets a life

Data tracking vertical measurements can help guide policy on amenities in high-rise buildings to foster integration.

Lim Sun Sun and Roland Bouffanais

Singapore's new Kampung Admiralty is built on the ruins of a 12-storey complex that was once the site of a 1971 riot. It is now a 50,000 sq ft building that combines a sheltered bus terminal with 360 units of social housing, along with a variety of commercial amenities. It is the largest of a series of social housing projects that the government has undertaken in recent years. These projects are designed to provide affordable housing for low-income households and to revitalize neighborhoods. Kampung Admiralty is an example of how the government is working to provide more than just housing, but also the amenities that add vibrancy to living in a high-rise building. The Kampung Admiralty includes a variety of commercial amenities, such as a supermarket, a bakery, and a dry cleaner, all of which are located on the ground floor of the building. This is intended to encourage residents to stay within the building for their daily needs, rather than going out to the streets. The Kampung Admiralty also includes a community hall and a children's library, which are designed to provide a sense of community and encourage social interaction. The Kampung Admiralty is an example of how social networks can be harnessed to improve urban living and create a more connected community. The Kampung Admiralty is a testament to the power of social networks to transform urban spaces and create a sense of community and belonging. It is a model for other cities around the world to follow.

The Kampung Admiralty is a model for other cities around the world to follow. It demonstrates that social networks can be harnessed to improve urban living and create a more connected community. The Kampung Admiralty is an example of how social networks can be harnessed to improve urban living and create a more connected community. It is a model for other cities around the world to follow.
